Wound Healing Center

A service of St. Bernardine Medical Center

There is no longer any reason to live with a non-healing wound

Non-healing wounds can attack any external area of the body, and they can take many forms. Often, a patient has multiple health issues simultaneously, making wound healing difficult. While only 30 percent of patients need hyperbaric medicine, the majority of patients do need a multispecialty approach, specialized dressings, nutritional support and treatment of the baseline genealogy.

With our caring staff and specialized treatment plans developed just for your patients, we have what they need to get back on their feet again. We are experts at caring for people whose wounds have resisted traditional treatment. Call us or come by to schedule an appointment.
